

Clarification for CA2

The justifications and explanations for your **code** choices should be included in the Jupyter notebooks or, if in the report, please indicate where/which section of the report to look . Why did you do things a particular way? Why did you use these libraries? If something doesn't work- why do you think so, and how do you think it might be fixed?

Individual lines/cells of code can be explained with comments, where appropriate.

Sections of code can be explained in markdown cells which give a brief summary of the objectives of the section as well as any interesting/notable/non-obvious code choices. You can reference a section of your report if you like.

If you are using code from another source eg StackOverflow, please cite it as such in a comment/markdown nearby.

Please note that such comments, justifications and explanations account for 50% of your grade!!

The project documentation must include sound justifications and explanation of your code choices. (code quality standards should also be applied)
